

How to enable Silverlight applications in Chrome

May 11, 2015

Google Chrome has ceased its support for Microsoft Silverlight, which is the API that Clermont County GIS web mapping has been developed in. Until we can get our web mapping updated, you have two options:

- You can use a different browser. Internet Explorer will continue to work just fine with Silverlight
 - You can go into the advanced settings of Chrome and enable it to continue to work with Silverlight by doing the following:
1. Open Chrome and type “chrome://flags” in the address bar and then click “Enable” under Enable NPAPI.

2. Close Chrome and reopen.
3. Go to <http://maps.clermontcountyohio.gov/basemap/default.aspx>
4. You will get a message saying that Silverlight needs your permission to run. Enable this by clicking on the red X on the right side of the address bar and choosing “Always allow plugins on maps.clermontcountyohio.gov...”
